The National Center for Water Quality Research (NCWQR) is a leader in surface and ground water research and monitoring in the Great Lakes region and beyond. Chemical analysis of freshwater samples, biological assessment of aquatic communities, and watershed modeling are performed at our facilities in Gillmor Hall on the Heidelberg University campus. The NCWQR staff uses the wealth of water quality data that is generated here concerning Lake Erie and numerous streams and groundwater wells across the nation to understand and interpret the impacts of food production on soil and water resources, the status of water quality, the effects of water quality on aquatic ecosystems, and future implications for the availability of healthy, usable water. Our insights are shared through contributions to national and international scholarly publications and research conferences as well as speaking engagements for the general public.

-Information from the NCWQR Heidelberg website

- Location: National Center for Water Quality Research Lab, Gillmor Hall
- Time: 6pm-8 pm
- Date: March 24th, 2016
- Agenda: Tour of the Water Quality Lab and Ice Cream Social to Follow
- Who's Invited: ACS Toledo Local Section and the student ACS chapters of Heidelberg, Tiffin, Toledo, and BGSU
